TO HELP**

**WORKS WITH  
AUTOMATIC DOORS**

**SCAN BODY  
TEMPERATURE**

## 1 Why is the SP Camera good for me?

The Scan & Protect Camera uses the latest face recognition and thermal imaging technology to identify who is entering your building and whether or not they are a risk to you, your employees or your customers.

## 2 How does it work?

The SP Camera integrates with your existing security system to identify any threats to your business. Simply stand in front of the camera, hold for a few seconds and wait for a decision. You don't even have to remove your face mask!

## 3 Will it work with our current security system?

Yes, the Scan & Protect Camera can be used to control your existing automatic doors so only the people you approve will be allowed to enter.

## 4 How long does it take to setup?

Not long at all. Once you receive the equipment and have an approved installer complete the set up, it's ready to use almost instantly.

## 5 Does it record?

Yes, the SP camera can be set to record straight onto an SD card, and the duration of recording is dependent on the capacity of the SD card used.

## 6 Do you offer support?

Yes, with our ongoing support plans and expertise we're here to help from the beginning of the process to the end.
